PET FACILITIES

AlphaPet

The AlphaPet production facility is located in Decatur, Alabama, U.S.A. Its first line came on-stream in September 2009 and its second line in June 2010. It is co-located with the BP Chemicals PX/PTA complex for the supply of PTA and some utilities. The AlphaPet production facility has a rated capacity of 432,000 tonnes per year. The site produces PET polymers for PET bottles, sheets and other applications.

The plant employs the new generation Uhde Inventa-Fischer (UIF) Melt to Resin (MTR®) technology. The use of MTR technology has a number of advantages over conventional PET technologies including significant capital and operational savings, reduced energy consumption and a smaller environmental footprint.

In 2011, a new recycling plant built onsite came into operation to serve major customers with post-consumer recycled PET. The plant uses Flake to Resin (FTR®) Technology also from UIF.

The plant has announced expansion plans to double the capacity by end of 2015 making it one the largest integrated sites in North America.

Type	Greenfield
Capacity	432,000 tonnes per annum
Technology	Uhde Inventa-Fischer MTR (Melt to Resin) , No SSP
Certificates	AIB Food Safety compliance for Quality systems evaluation , BBB (Better Business Bureau for business ethics)
Products	PET polymers for PET bottles, sheets, and other applications
Site Size	40 acres
