

Factory Overview

Kawasaki Plant of Showa Denko K.K.

Overview

Since its establishment in 1930, the Kawasaki Plant has been developing chemical technologies for producing a variety organic, inorganic, and high-polymer chemicals. The plant forms an industrial complex.

Characteristics

Located in a coastal industrial zone in the Keihin-area, which facilitates efficient physical distribution and diversification of product suppliers, the Kawasaki Plant has achieved top-level productivity in the specialty gas industry.

Analytical technologies

At the Kawasaki Plant, precision analyses required to produce specialty gases are conducted drawing on years of expertise in general chemical analyses.

Certification

To ensure a stable supply of products, SDK has obtained a certificate of compliance with ISO 9002 in raw materials, production, analysis, and delivery control, and ISO 14001 in tough environmental criteria.
