Single-stage Process

Uhde Inventa-Fischer's single stage process has been used successfully for several applications since it produces a highly homogeneous polymer with a low level of cyclic dimer. It is especially suited for textile applications and is optimized to produce high performance textile polymer.

Uhde Inventa-Fischer's single-stage process has proven to be very reliable, easy to operate, and economical. Uhde Inventa-Fischer built the world's largest single-stage polymerizer with a nominal capacity of 160 mt/d for a client in China.

We can offer the single stage polymerization process with up to 160 t/d in one line.
