

Rice Hull/ Husk Reinforced

General

We purchase rice hulls/husks from a processor based in the United States. Rice hulls are the shell that surrounds the grain of rice. Our processor hammer mills these hulls into a granular form that we incorporate into our compound.

A unique characteristic of the rice hull is that it is naturally flame resistant. Rice hulls will not flame up. When burning occurs they only smolder.

Characteristics

- **Stiffness**
- **Dimensionally stable**
- **Low moisture absorption**
- **Lower specific gravity than minerals**
- **Excellent chemical and mold resistance**
- **Naturally flame retardant**
- **Colorable / Unique – different than wood**
- **Good for traditional mineral filled applications**
