Non-US GAAP Financial Measures (cont'd)

Adjusted net earnings and adjusted EPS are non-GAAP financial measures that are calculated by excluding the after-tax costs related to (i) the 2015 Restructuring activities, which included involuntary terminations, the abandonment of certain leased offices, combining operational organizations and the co-location of employees into other existing offices; charges associated with our Europe, U.K. and Middle East region, which included write-offs on contract accounts receivable and charges for statutory redundancy and severance costs; and restructuring activities associated with the Company's announced definitive agreement to acquire CH2M, which included involuntary terminations (collectively referred to as "Restructuring and other charges"), and (ii) professional fees, integration costs and related costs associated with the CH2M acquisition (collectively referred to as "CH2M professional fees and integration costs"), which are not considered by management to be part of the Company's ordinary operations. Adjusted operating profit is calculated by excluding the pre-tax costs of the Restructuring and other charges and the CH2M professional fees and integration costs. We believe that the adjusted net earnings, adjusted EPS, adjusted operating profit, adjusted operating profit margin and adjusted gross margin are useful to management, investors and other users of our financial information in evaluating the Company's operating results and understanding the Company's operating trends by excluding the effects of the Restructuring and other charges and the professional fees, integration costs and related costs associated with CH2M acquisition, which can obscure underlying trends. Additionally, management uses these financial measures in its own evaluation of the Company's performance, particularly when comparing performance to past periods, and believes these measures are useful for investors because they facilitate a comparison of our financial results from period to period.

The Company provides non-GAAP measures to supplement U.S. GAAP measures, as they provide additional insight into the Company's financial results. However, non-GAAP measures have limitations as analytical tools and should not be considered in isolation and are not in accordance with, or a substitute for, U.S. GAAP measures. In addition, other companies may define non-GAAP measures differently, which limits the ability of investors to compare non-GAAP measures of the Company to those used by our peer companies.
