MDI capacity increases at BASF Verbund site in Antwerp, Belgium

■ Annual MDI capacity increases to 650,000 metric tons per year

Ludwigshafen, Germany – January 23, 2017. BASF has completed a capacity increase of its methylene diphenyl diisocyanate (MDI) production facilities at the company's Verbund site in Antwerp, Belgium. The capacity increase brings the annual production of MDI in Antwerp from 560,000 metric tons per year to 650,000 metric tons per year.

MDI is an important component for polyurethanes – an extremely versatile plastics material. It contributes to improved insulation, provides lighter materials for cars, and helps save energy in buildings.

About BASF

At BASF, we create chemistry for a sustainable future. We combine economic success with environmental protection and social responsibility. The approximately 112,000 employees in the BASF Group work on contributing to the success of our customers in nearly all sectors and almost every country in the world. Our portfolio is organized into five segments: Chemicals, Performance Products, Functional Materials & Solutions, Agricultural Solutions and Oil & Gas. BASF generated sales of more than €70 billion in 2015. BASF shares are traded on the stock exchanges in Frankfurt (BAS), London (BFA) and Zurich (AN). Further information at www.basf.com.
