# BASF Catalysts doubles production capacity for mobile emissions catalysts in India

- **New site inaugurated in Chennai, India**
- **Upgraded production capabilities to help local automakers meet stricter government emissions requirements**

Chennai, India – March 2, 2017 – BASF Catalysts India Private Limited (“BASF Catalysts”) today inaugurated its new mobile emissions catalysts manufacturing site. The site includes a new 47,000-square-meter production plant, which replaces an existing BASF plant in Chennai and is the culmination of a three-year expansion project, which has doubled the company’s catalyst manufacturing capacity in India.

World-class manufacturing lines are housed in the new plant, producing a full range of catalyst solutions, including light duty, heavy duty and motorcycle emissions catalysts to meet growing market demand and customer technology needs. The site produces BASF EMPROT<sup>™</sup> emissions control solutions including the Three-Way Catalyst (TWC), Diesel Oxidation Catalyst (DOC), Catalyzed Soot Filter (CSF) and Selective Catalytic Reduction (SCR) Catalyst.

“Around the Asia Pacific region, and especially here in India, mobility is ever more important. At the same time, more and more vehicles are being manufactured locally in India. To meet the demands of this growth, according to BASF’s Asia Pacific strategy and in support of Make in India and other government initiatives, we are expanding our local production network in the region,” said Sanjeev Gandhi, member of the Board of Executive Directors, BASF SE responsible for Asia Pacific.

“With the expansion of our manufacturing capacity and capabilities in Chennai, BASF Catalysts is better positioned to respond to the increase in demand for advanced emissions control solutions in India. It will also help our customers meet increasingly stringent requirements such as the Indian government’s decision to advance from BS IV emissions norms to BS VI norms by 2020,” said Dirk Demuth, Senior Vice President, Mobile Emissions Catalysts, BASF. “Furthermore, the new site will produce advanced heavy duty emissions catalysts, which will allow us to better serve the fast-growing automotive markets in India,” he added.

“With initiatives like Make in India, [1] Smart Cities, [2] and Swachh Bharat, [3] India is in the forefront of rapid and sustainable development. This offers significant opportunities for the chemical industry as well as BASF. We are investing actively in India to realize these opportunities. The expansion of our mobile emissions catalysts plant in Chennai is another example of our continued focus on investing in assets for growth,” said Raman Ramachandran, Head of BASF operations in South Asia. “Through its local subsidiaries BASF India Limited, BASF Chemicals India Private Limited and BASF Catalysts India Private Limited, the BASF Group has invested approximately €300 million, over the past four years, in manufacturing and Research and Development,” he added.

### About BASF's Catalysts division

BASF Group's Catalysts division is the world's leading supplier of environmental and process catalysts. The division offers exceptional expertise in the development of technologies that protect the air we breathe, produce the fuels that power our world and ensure efficient production of a wide variety of chemicals, plastics and other products, including advanced battery materials. By leveraging our industry-leading R&D platforms, passion for innovation and deep knowledge of precious and base metals, BASF Group's Catalysts division develops unique, proprietary solutions that drive customer success. Further information on the division is available on the Internet at [www.catalysts.basf.com](http://www.catalysts.basf.com).

### About BASF

At BASF, we create chemistry for a sustainable future. We combine economic success with environmental protection and social responsibility. The approximately 114,000 employees in the BASF Group work on contributing to the success of our customers in nearly all sectors and almost every country in the world. Our portfolio is organized into five segments: Chemicals, Performance Products, Functional Materials & Solutions, Agricultural Solutions and Oil & Gas. BASF generated sales of about €58 billion in 2016. BASF shares are traded on the stock exchanges in Frankfurt (BAS), London (BFA) and Zurich (BAS). Further information at [www.basf.com](http://www.basf.com).
