

About Darling Ingredients

Darling Global Presence

Darling Ingredients Inc. is a global corporation developing and producing sustainable food, feed and fuel ingredients from natural and organic bionutrients. Darling collects and recycles animal by-products, bakery residuals and used cooking oil from poultry and meat processors, commercial bakeries, grocery stores, butcher shops, and food service establishments from around the world, and transforms these raw materials into useable ingredients for the pharmaceutical, food, pet food, feed, technical, fuel, bioenergy and fertilizer industries.

Founded in 1882, Darling is headquartered in Irving, Texas and operates over 200 locations on five continents. As the largest renderer in North America, Darling's nationwide service coverage provides a superior platform for the collection of animal fats and used cooking oil feedstock used at the Diamond Green Diesel facility.

For over 130 years, Darling's growth and success has been founded on innovation and sustainability, creating new markets for its growing and diverse product portfolio. Pioneering the way, Darling has been producing biodiesel from animal fats and cooking oils since 1998, constructing the first commercial, flexible-feedstock biodiesel facilities in the U.S. and Canada.
